Contract:	W03	Site Manager:	Auri's Kulsinskas	Date (w/c):	04/06/18	Method (Title, Re date)
Location and description of works: Level 7-14, Install temp. fire doors to Staircase Block A and B						

Page 1 of 3

Before starting work, STOP, THINK and CHECK		Yes	No	N/A
If the answer to any question below is NO, do not start work until the issues are resolved				
1. Method statements, risk assessments and permits				
Have you read and understood the method statement and risk assessment for the task?		✓		
Is everyone on your team briefed on the method statement for the task?		✓		
Have you carried out your weekly toolbox talk? Please give title of toolbox talk: <u>Safe use of Hop-ups</u>		✓		
Do you have COSHH Assessments and Safety Data Sheets in place for all hazardous substances that will be used?		✓		
Have you carried out Manual Handling Assessments and planned for any deliveries / extraordinary activities?		✓		
2. Place of work				
Are you satisfied that your team has a safe place to work?		✓		
Have you checked access equipment has been inspected as required and certification issued? E.g. Podium steps, scaffold towers		✓		
Are other contractors working adjacent to you aware of what you are doing today? Are you aware of what they will be doing?		✓		
Are third parties and members of the public securely protected from falling materials?		✓		
Does your team know the safe access and egress routes to their places of work?		✓		
3. Task specific				
Are all necessary tools and equipment on site to carry out your work in a safe / efficient manner?		✓		
Are you confident there are no health and safety risks in your work task(s)?		✓		
Are you certain that the operatives you are putting to work are competent for their assigned tasks?		✓		
Are the team equipped with the correct PPE to carry out the task?		✓		
4. Variations				
Have the team members changed? (If yes revise)			✓	
Has the task or working environment changed significantly to require a risk assessment and method statement (if yes, work to stop and new method statement to be produced)			✓	
Remember, as the supervisor YOU are responsible for the safety of YOUR team

Note: Claims can only be made for your employees or labour-only sub-contractors

No. Attended 5	Duration 30 mins	Total Time 2½ HOURS	Employer Reference 2453745
-------------------	---------------------	------------------------	-------------------------------

Toolbox Talk No. 35 PORTABLE ELECTRICAL TOOLS

ONLY 110V electric tools or battery operated tools are to be used on site unless agreed by site management.

- Always use tools via an RCD (Residual Current Device) or with a 110-volt transformer, centre-tapped to earth.

EQUIPMENT USER CHECKLIST (includes extension leads, associated plugs and sockets)

1. Check for damage (i.e. apart from light scuffing) to cable sheath.
2. Check plug for damage (i.e. casing cracked, pins bent)
3. Ensure that there are no inadequate joints in cable (i.e. taped joints).
4. Ensure outer sheath of cable is effectively secured where it enters plug or equipment.
5. Check that the equipment has not been subjected to conditions for which it is not suitable (i.e. wet or excessively contaminated).
6. Check for damage to external casing of equipment, loose parts or screws.
7. Check for evidence of overheating (burn marks or discolouration).
8. Check that it has been tested and inspected within the last three months.
9. Ensure cable is long enough to reach work area.

IF ANY FAULT IS DISCOVERED DO NOT USE THE EQUIPMENT– ADVISE YOUR SUPERVISOR WHO WILL ARRANGE FOR QUARANTINE AND REPAIR.

Q: What are two things you should check before using a portable electric tool?

Use of Portable Electric Tools

1. Only use the equipment for its designed purpose.
2. Ensure switches are working correctly, before connecting to the power supply.
3. Wear eye protection if there is any risk to your eyes.
4. Disconnect tools from the power supply when not in use.
5. A competent electrician should regularly inspect electric power tools.

Q: If drilling, when should you wear eye protection?

Q: How often should electrical power tools be inspected?

Hazards

1. Keep power cables off the floor. They may be damaged or trip somebody up.
2. Electrical tools often present a noise hazard, wear ear protection.
3. Water conducts electricity, keep equipment clean and dry.
4. Never connect a portable electric tool to a lighting socket.
5. Don't use blunt, worn, or damaged bits and accessories.
6. Wear eye protection, to protect from swarf and dust.

Q: What are three potential hazards when using portable electric tools?

Questions for you:

Q: What voltage tools should be used on site?

Q: Who should inspect and maintain portable electric tools?

REMEMBER: Look after your tools and they will look after you!

Toolbox Talk No. 38 SAFE STACKING

Many accidents occur when materials are removed from stacks, in particular when this is done by hand. Care taken when material is stacked initially can help prevent many of these.

1. When handling materials wear protective clothing, i.e. safety helmet, gloves and steel-toed boots.
2. Only stack material in authorised areas, NEVER near doorways, access ways, or on fire escape routes.
3. Stack on a level surface and provide packing.
4. Never make stacks higher than 3 times the minimum base width.
5. Materials stacked by machine may have to be removed by hand, consider this in the method of placing.
6. When handling materials by hand, check weight if in doubt ASK.
7. If material is being lowered by machine, keep hands clear of load and / or any obstruction.

SHEET MATERIAL

- Stack flat where possible. If corners are sharp – PROTECT (examples – reinforcements mesh, steel sheets).

PIPES AND TUBES

- Where small diameter stack in racks or stillages, if large diameter securely chock at base and at subsequent cross bearers. Pyramid stacks can quickly spread and “a rolling tube damages toes”.

BRICKS / BLOCKS / PALLETED MATERIALS

- Take care, ensure level base and restrict height of stack – many of these are removed by hand.
- If banding is damaged or materials are displaced in the pack do not stack other material on top.
- Leave sufficient space between different materials for safe removal.

TIMBER

- Racks are best for small sized timbers – saves space.
- Joists and larger timbers should be placed on bearers and cross packing should be used to level the stack.
- Try to keep different lengths in separate stacks.

LARGE PREFABRICATED PANELS – FLOORS / WALLS

- Stack flat or store secured in designated racks. DO NOT lean against parts of the building or against temporary structures.
- If stacked vertically, use suitable racks to prevent collapse. Material stacked vertically against walls can collapse whilst being removed or may overload walls etc.
