Toolbox Talk No. 73 POLLUTION CONTROL

SOURCES OF POLLUTION

- Pollution can affect the air, land or water courses such as streams
- Smoke, fumes, dust, exhaust emissions and vapours all pollute the air
- Uncontrolled use of chemicals, oils, fuels and other harmful substances can contaminate the land
- In some cases, land pollutants can enter waterways directly or via the surface drains and pollute domestic water supplies many miles away
- Excessive noise levels are also regarded as a form of pollution
- Work with asbestos, lead and radiation are other sources of pollution for which strict control measures must be in place

CONTROL OF POLLUTION

- Always use harmful substances with care and dispose of used and empty containers in the proper manner
- Store bulk quantities of substances such as diesel, oils, greases, etc. on a hard standing to avoid seepage of leaks and spills into the ground. You may also need to consider bunded storage, depending on the size of the containers
- If practical, create a bund wall around the hard standing to prevent spillages reaching the surrounding land
- Try to avoid running plant powered by internal combustion engines inside buildings or in enclosed spaces – allow exhaust emissions to disperse
- Do not leave engines of plant running when they are not being used
- Electrically powered plant and equipment is more environmentally friendly
- Engine driven plant and equipment should be regularly serviced to stop or reduce leakage of oils and other fluids
- Place drip trays under engine-powered plant where necessary to avoid contamination of the land and, possibly water courses
- Reduce noise levels arising out of your work activities where possible
- If you are aware of any leak or spillage of any substance which you believe could result in pollution, inform your supervisor immediately
