Rotary Drill Bosch	2.5						

Comments / Notes:

Any developing sensation experienced during the period of works is to be reported immediately by operatives to the Site Manager, who is required to inform the Company Safety Officer. Operatives are to be reminded of the following: Not to smoke, to keep warm and to use the tools as directed.

This document is to be used as a tool for both monitoring and controlling operations. The Company Safety Officer will monitor and calculate the vibration exposure for each operative and advise if any action or procedural controls need to be implemented on site.

Please include this form in your weekly returns to RCL Head Office and cc. Rachel Widdows.

Toolbox Talk No.94 PERSONAL SAFETY IN OR AROUND VEHICLES

Why?

- Our company goal is to ensure the safety of persons around vehicles, which can often involve working at height. More than 2000 serious injuries to people falling from vehicles are reported each year and on average, five of these are fatal. Many of these injuries are broken arms or legs, resulting in weeks off work and possible loss of earnings.
- Common accidents include falls from trailers, tail-lifts and truck cabs. The majority of falls from tipper lorries occur during sheeting and unsheeting.
- By law as a driver, it is your responsibility to make sure that you are taking practical measures to reduce the risk of yourself and others around you from falling while working at height and/or prevent falls from vehicles.

Causes of falls include:

- Slipping and falling from loads and access steps and ladders
- Broken ropes or torn sheets causing overbalancing inappropriate footwear
- Bad weather
- Lack of awareness and training

Getting on and off the vehicle

- DON'T jump down – this is bad for your knees and you are more likely to fall
- Always use steps and handholds if provided
- Take a few seconds to climb down from the cab, load area or catwalk facing the vehicle and use the handhold
- Report missing or damaged equipment
- Before stepping off the vehicle, check for uneven surfaces such as potholes or kerbs which may cause you to slip
- Use the three points of contact rule

Keeping your vehicle safe

- Report broken boards and any other objects that could cause a fall
- Keep the load area tidy – pick up loose ropes, packaging etc
- Check that the straps are safely stored on curtainsiders so people don't trip on them
- Clean up spills and dirt such as diesel or mud on the catwalk or load area to stop people slipping in them

How you can work safely

- Avoid working at height unless it is essential
- Keep the soles of your footwear clean to reduce the risk of slipping
- Follow safe systems of work for loading and unloading vehicles
- Make sure you have been trained in and follow the company's safe ways of working if you have to use equipment such as tail-lifts or lorry loader cranes
- Use the 'three-point hold rule' – keep at least three points of contact with the vehicle you are climbing, moving one limb at a time and testing the new hold before moving on
- Use safe ways of getting on or off the vehicle when carrying out maintenance above ground level, for example by using gantries or tower scaffolds
- Look at what other companies do – if you see a good idea suggest it to your safety adviser or supervisor

RAPHAEL
CONTRACTING LTD

SPECIALIST
JOINERY LIMITED

How you can load/unload your vehicle safely

- Use adequate load restraints Use dedicated loading bays
- Load/unload from roads marked with single and double yellow lines unless there are loading restrictions
- Load/unload on Red Routes and other specialist thoroughfares (specially marked bays and signs indicate when and where loading/unloading is permitted. This will be indicated through the local signage network
- Make sure you're clear of other traffic, pedestrians and people not involved in loading or unloading
- Spread the load as evenly as possible, during both loading and unloading. Uneven loads can make the vehicle or trailer unstable
- Loads should be secured, or arranged so that they do not slide around. Racking may help stability
- Make sure safety equipment is considered. Mechanical equipment and heavy moving loads are dangerous
- Ensure the vehicle or trailer has its brakes applied and all stabilisers are used. The vehicle should be as stable as possible
- Never overload the vehicle. Overloaded vehicles can become unstable, difficult to steer or be less able to brake
- Always check the floor or deck of the loading area before loading to make sure it is safe. Look out for debris, broken boarding, etc

NG Bailey

Hilton Hotel Woking

Tool Box Talk:

Introducing 230/415 Volt
Electricity to Site

Danger
415 volts

1	Date of Energisation	<i>Provisionally July 2020</i>
2	<p>The dangers of interfering with live equipment.</p> <ol style="list-style-type: none"> 1. Death to yourself or others. 2. Shock. 3. Burns. 4. Falls from loss of muscle control. 5. Fire. 	<p>Electricity can kill or severely injure people and cause damage to property from the effects of fires and explosions. Every year accidents at work involving electric shock or burns are reported to the Health and Safety Executive (HSE). Electric shocks do not always cause lasting injury but in certain circumstances can result in death.</p> <p>The sudden muscular contraction during the shock can result in injuries from, for example, falling. Electric current flowing through the body can cause deep burns.</p>  <p>Electrical arcing (sometimes called a 'flashover' or 'arc flash'), perhaps as a result of a short circuit caused by unsafe working practices, can generate intense heat leading to deep-seated and slow-healing burns, even if it persists for a short time.</p>

Most electrical accidents occur because people are working on or near equipment and exhibit;

- Poor communication; equipment thought to be dead is actually live.
- Poor planning and organisation; equipment is known to be live but those involved do not have adequate training or appropriate equipment to prevent injury, or they have not taken adequate precautions.
- Poor co-operation; vandalism causing safety precautions to break down leading to injury by negligence. Disregard for the safety procedures put in place.

3	Aim of Electrical Safe System of Work	The fundamental aim of the permit system is to ensure that everyone on site is afforded a safe working environment and goes home safe, healthy and fit.
4	Request for power procedures	We request at least 48 Hour notice and you must fill in a "Request for Power" Permit. These must be given to the NGB Electrical Appointed Person (AP) before 9 a.m. as he will only issue permits up until that time every day.
5	Secure areas, which will require permits	LV Switchroom and Electrical Risers. This is not exhaustive and may change during course of construction. Adequate information will be displayed/distributed.
6	Procedures for obtaining permits.	Permits to be requested up until 2pm daily for next day works which can be left in the drop in box outside the permit office on level 3, NGB will then process each permit in the afternoon and it will be ready for collection the next morning between 8:00 and 9:00 for issue. All permits and keys must be returned by 4.15 p.m. every day. This is to allow the AP sufficient time to check the areas have been left in a safe state. All trades will need to bring with the their Daily task briefing detailing their works in order to obtain a permit. Please leave permit requests in no later than 2PM on the day before you need the permit.
7	Who and What	All trades/contractors within the Hilton Hotel Woking project will be subject to the conditions implemented within the NG Bailey Electrical Safe System of Work with no exceptions. This includes; <ul style="list-style-type: none"> • A Limitation of Access permit if you require access to areas containing electrical equipment controlled by NG Bailey e.g electrical risers. • A permit-to-work will need to be requested if you require entry to a previously LIVE or potentially LIVE piece of equipment e.g. Access to LV Panel, Fire Alarm Panel, BMS Controls. <u>Areas will be locked with signs posted and entry will be via permit only.</u>
8	Responsibilities on the person in charge who is ISSUED a permit	The operative must adhere to any special measures set out on the Permit. <ul style="list-style-type: none"> • If he/she leaves the area, the door must be locked. • At no time is the area to be left unattended. • The recipient of an electrical permit-to-work should keep it for reference while the work is in progress and to prevent inadvertent cancellation and re-energisation of the equipment. • Only names included on the permit may work under its provision.

9	Disciplinary procedures for contravening the permit system or interfering with live Equipment.	Due to the nature and consequences of working with 230/415 Volt electricity, any breaches of the Permit system will result in NO future permits being issued to that particular person. They and their supervisor will be required to be re-inducted. Exceptional circumstances may result in their removal from the project.
---	---	---

10	Contractors - Plan Ahead	<p>Many electrical accidents are due to a failure to plan ahead. Planning should consider the management, supervision, implementation and completion of the work, and should lead to a formal system of work based on information in the safety rules and your task-specific risk assessment.</p> <p>You should consider the following:</p> <ul style="list-style-type: none"> • The work to be done; how and why. • The hazards of the system or equipment to be worked on and the risks associated with the work, if applicable. • The people doing the work, their competence and the level of supervision necessary that may influence their perception of the risks involved. • The precautions to be taken and the system of work to be employed.
----	---------------------------------	--

- We are all required **by law** to take reasonable care of ourselves and others when at work.
- We also have a duty **by law** to NOT interfere with anything provided in the interest of Health, Safety or Welfare.
- Signage and information will be displayed on site to direct everyone safely but everything must be treated as **LIVE**
- **Take no chances** and if in doubt about live cabling with the potential to cause harm or the possibility of accidental damage to the electrical system then contact a NGB Electrical employee as soon as possible.

THINK...

Toolbox Talk No. 8 ACCIDENT REPORTING AND INVESTIGATION

ACCIDENT REPORTING

Health and safety law requires that the following types of accident are reported to the HSE:

- Fatalities and major accidents
- Injuries resulting in more than 7 days off work or inability to carry on with normal work
- Dangerous occurrences

By receiving such accident reports, the HSE can establish accident trends, highlight areas of weakness and effectively target preventative measures.

- All persons on site must ensure that all accidents, no matter how minor, are recorded in the site Accident Book (BI 510)
- In the future you may want to establish a link between a current health problem and a previous accident to claim compensation
- Accidents to members of the public arising out of site activities must also be reported

ACCIDENT INVESTIGATION

- Your employer has a duty to thoroughly investigate all accidents to establish the cause and prevent re-occurrence
- The HSE will also investigate fatalities and other serious accidents

If you are involved in an investigation:

- ✓ Listen carefully to the questions and remain calm
- ✓ State honestly what you saw or heard
- ✓ Do not be afraid to say when you do not know an answer

Remember that the reason for the investigation is to prevent the accident happening again

COMMON CAUSES OF ACCIDENTS:

- People not thinking about what they are doing
- People not following instructions
- People not following training they've been given
- Unsafe manual handling, loading, stacking and storing
- Overloading of working places, scaffolding and hoists, etc.
- Incorrect use of plant and machinery
- Use of faulty equipment with improvised repairs
- Illegal removal of guards and barriers
- Failure to use protective safety equipment
- Ignoring safety signals, signs and warning devices

Q: What are the causes of accidents in the work place?

THE COST OF ACCIDENTS TO YOU

- Pain, suffering and continuing disability
- Loss of earnings and extra expense due to disability
- Incapacity for the job and your leisure activities
- Unable to support family and possible family break-up

Q: What could the cost of an accident be to you?

DOCUMENT REFERENCE: DOCUMENT OWNER:	TOOLBOX TALKS MOB	VERSION NO:	8	CREATION DATE: LAST REVISION DATE:	11/08/2010 10/05/2018	Page 13 of 141
--	----------------------	-------------	---	---------------------------------------	--------------------------	----------------

ACCIDENT PREVENTION

- Don't remove guards from machines
- Don't handle substances without knowing the hazards
- Don't use machines if not trained and follow instructions
- Always comply with safe working practices
- Wear and use PPE correctly, don't abuse it
- Don't direct compressed air at yourself or others, it kills
- Never mess around while working
- Never use defective equipment or machinery
- Help to keep the workplace clean and tidy
- Wash and dry hands to remove substances from skin
- Report unsafe conditions to your supervisor
- Use correct tools and equipment for the job
- Obey safety rules and signs
- Don't leave tools lying about where they can fall

Q: Before using substances what must you find out?

Q: Why shouldn't you mess around on site?

Q: How could an accident affect you and your family?

Q: Why shouldn't you remove guards from machinery?

REMEMBER:

Unsafe People create Unsafe Conditions!
