Toolbox Talk No. 78 PLASTER AND PLASTERBOARD

Since 1 April, 2009, in England and Wales, if you send waste containing any amount of plaster or plasterboard to landfill it will go to a separate storage area in the landfill designated for high sulphate waste. This means it will cost you extortionate amounts of money to dispose of it and it won't be long before landfills are full to capacity anyway and disposal at landfill will not be an option.

What you must do

- Make sure that you set aside a dry storage area for bagged plaster mix. This will reduce wastage and may save you money.
- Do not wash mixed or dry plaster into drains or surface waters as this can cause water pollution.
- You can recycle clean, uncontaminated plasterboard. Speak to your supplier for more information.
- Allow wet, mixed plaster to go off before disposal. You must not dispose of liquid wastes to landfill.
- You must separate plaster, plasterboard and other gypsum products from your general wastes, as they contain high levels of sulphate.

Good practice

In England and Wales the Environment Agency and WRAP have developed a Quality Protocol for producing and using products made from gypsum from waste plasterboard. Uses include:

- as a raw material in the manufacture of new gypsum-based products
- as a soil treatment agent
- as an additive in cement clinker.

If you follow the protocol, the gypsum will no longer be classified as waste, so it can be used without waste management controls.
